

IN THE CLAIMS:

1. (Original) A personal safety device including at least one housing containing a quantity of a marking substance, an explosive charge, and a triggering apparatus which is operative to detonate the explosive charge to propel the marking substance from the housing to mark the area surrounding the device.
2. (Original) A device according to claim 1 wherein the triggering apparatus is a mechanically actuated apparatus.
3. (Original) A device according to claim 2 wherein the triggering apparatus has an ignitor for igniting and thus detonating the explosive charge.
4. (Original) A device according to claim 3 wherein the ignitor is actuated by moving one component relative to another component, to produce spark ignition by friction.
5. (Original) A device according to claim 4 wherein one or both of the components has a chemically treated surface which reacts as the components are relatively moved, to enhance ignition.
6. (Currently amended) A device according to ~~any one of the preceding claims~~ claim 1 wherein the housing includes a first housing part and a second relatively moveable housing part, movement of the second housing part relative to the first housing part ~~to operate~~ operating the triggering device.
7. (Original) A device according to claim 6 wherein the first housing part is attached in use, to a user or a structure.

8. (Currently amended) A device according to claim 6 ~~or claim 7 where~~
~~dependant upon claim 4~~ wherein the ignitor is actuated by moving one component
relating to another component, to produce spark ignition by friction, and wherein the
triggering device includes a cord attached to one or other of the triggering apparatus'
relatively moveable components, the one component being moved relative to the other by
a user moving the second housing part away from the first housing part to pull on the
cord.

9. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the device includes a guard which conceals or otherwise guards
the triggering apparatus against accidental actuation.

10. (Currently amended) A device according to claim 9 ~~where dependant upon~~
~~claim 6~~ wherein the housing includes a first housing part and a second relatively
moveable part, movement of the second housing part relative to the first housing part
operating the triggering device, and wherein the guard includes a slidable or otherwise
moveable or removable part, which in normal use, prevents the housing parts being
relatively moved and hence preventing the triggering apparatus being actuated.

11. (Currently amended) A device according to claim 9 ~~or claim 10~~ wherein
the guard is readily moveable or removable in preparation for operation of the device,
with minimal dextrous ability.

12. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the marking substance is a generally harmless substance.

13. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the marking substance includes a highly staining and difficult to
remove dye.

14. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the marking substance includes material which is not visible in
the visual spectrum.

15. (Original) A device according to claim 14 wherein the marking substance
includes a fluorescent compound which is detectable under UV wavelength light; or a
trace material detectable by chromatography, X-ray fluorescence, or other otherwise by
spectroscopy.

16. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the marking substance includes a material with a unique
identifier.

17. (Original) A device according to claim 16 wherein the material contains a
unique chemical identifier such as DNA, or a chemically coded taggant.

18. (Currently amended) A device according to ~~any one of the preceding~~
~~claims~~ claim 1 wherein the device includes a transmitter for transmitting a distress signal
when the device is operated by actuating the triggering apparatus.

19. (Original) A device according to claim 18 wherein the device includes a
receiver to receive a signal from a remote location, the receiver being operable in
response, to actuate the transmitter to transmit the distress signal.

20. (Currently amended) A device according to ~~any one of the preceding claims~~ claim 1 wherein the device includes a re-chargeable or replaceable power pack.

21. (Cancelled)

22. (Original) A personal safety system including a personal safety device including at least one housing containing a transceiver, the transceiver being operable to transmit a distress signal, the system further including a remote receiver to receive the transmitted distress signal, and a remote transmitter for transmitting an actuating signal to the personal safety device, the transceiver receiving the remotely transmitted actuating signal and transmitting the distress signal in response.

23. (Currently amended) A system according to claim 22 wherein the personal safety device includes ~~any of the features of any one of claims 1 to 21~~ at least one housing containing a quantity of a marking substance, an explosive charge, and a triggering apparatus which is operative to detonate the explosive charge to propel the marking substance from the housing to mark the area surrounding the device.

24. (Currently amended) A system according to claim 22 ~~or claim 23~~ wherein the system includes a plurality of remote receivers, so that the distress signal ~~may be received~~ is receivable by a receiver in range and used to locate the personal safety device.

25-26. (Cancelled)
